IDAPA 02 - DEPARTMENT OF AGRICULTURE

02.02.14 - RULES FOR WEIGHTS AND MEASURES

DOCKET NO. 02-0214-1601

The following is a list of the significant changes that will occur in the 2017 edition of the National Institute of Standards and Technology (NIST) Handbook 44. This list does not include several clerical or editorial changes. This entire document can be viewed online after November of 2016 at <http://www.nist.gov/pml/wmd/index.cfm> . This document is adopted as a reference document by the ISDA Weights and Measures program.

- Identification of Software – Added the provision mandating electronic software based devices shall be capable of displaying the version of software, non-retroactive as of January 1, 2022. This change will mostly affect manufactures of weighing and measuring devices and regulatory officials.
- Metrological Software Update – Added a provision providing that software updates that change the metrological aspect of the device will be considered a sealable event. This affects manufactures of weighing and measuring devices, service entities and regulatory officials.
- Relationship of Load Cell Verification to Scale Division – This change clarifies the calculation used to determine the minimum load cell verification interval when a vehicle scale has more than one weighing platform. This affects manufacturers, service entities and regulatory officials.
- Prescribed Test Patterns and Test Loads for Livestock Scales – This changes how test loads are applied to the deck of livestock scales. This affects regulatory officials and service entities.
- Card Operated Retail Motor Fuel Devices – Gas pumps once authorized by the attendant must de-authorize after 2 minutes if not activated by the user. This requirement is to prevent unauthorized use of a device. This change will affect customers and regulatory officials.
- Verification of Linearization Factors - This change updates Handbook 44 to reflect technological changes in registers for liquid measuring devices and to alert Weights and Measures officials to the errors imposed by start-up and shut-down of devices. This affects regulatory officials.

- Return to Zero – This change requires that indicators (readouts) of weighing or measuring devices shall not be resettable to zero during a delivery. This affects regulatory officials.
- Categories of Sealing Methods – This allows security sealing of electronic devices event logger to be available on demand through the devices indicator or other available electronic means. This affects device manufactures and regulatory officials.
- Vapor Elimination – This change mandates that vapor elimination lines used on metering devices on gas pumps, propane meters and vehicle tank mounted meters shall be made of appropriate non-collapsible material. This affects service entities of measuring devices and regulatory officials.
- Test Drafts – This change allows for comparisons between master meters and calibrated transfer vessels (provers) as long as the test drafts are equal in amount and delivered at the devices maximum flow rate for 2 minutes. This affects regulatory officials.
- Wholesale Devices - This change allows for a “special” test to determine the characteristics of the metering system. The meter is tested at a flow rate slightly above the manufactures slowest flow rating. This affects regulatory officials.
- Multiple Dimension Measuring Devices – This change requires that multi-dimension measuring devices indicate the same unit of measure for all dimensions. This affects manufactures and regulatory officials. Also, there are changes to marking requirements for Multiple Dimension Measuring Systems – This change updates the required information on accompanying documents by the manufacturer, requiring the name of the manufacturer and model designation. This affects manufactures.
- Definitions – Updates to the definitions section of the handbook include adding the definition for “Diesel Gallon Equivalent” (DGE) and “Gasoline Gallon Equivalent” (GGE) and their metric equivalents. This addition to the handbook identifies the conversion factors used for liquefied natural gas and compressed natural gas used as a motor fuel to be identified and sold as DGE or GGE units, or their perspective metric equivalents. This change will affect retail establishments that sell natural gas for motor fuel, service entities and regulatory officials.
- Taxi Meters – This change requires that at the conclusion of the transaction, a customer receipt be printed and that no other charges shall occur until the meter has been cleared. Included in this change is a requirement that when a flat rate or negotiated rate is established, that fare may no longer be advanced by movement of the vehicle or the time mechanism on the meter. This change will affect taxi meter manufacturers and regulatory officials.

INCORPORATION BY REFERENCE SYNOPSIS

In compliance with Section 67-5223(4), Idaho Code, the following is a synopsis of the differences between the materials previously incorporated by reference in this rule that are currently of full force and effect and newly revised or amended versions of these same materials that are being proposed for incorporation by reference under this rulemaking.

IDAPA 02 - DEPARTMENT OF AGRICULTURE

02.04.08 - RULES GOVERNING GRADE A MILK AND MILK PRODUCTS

DOCKET NO. 02-0408-1601

Amendments to the 2015 Grade A Pasteurized Milk Ordinance (PMO)

The PMO was modified to bring requirements in line with the Preventative Controls Rule of the Food Safety Modernization Act (FSMA) that will allow FDA to accept the PMO as a Food Safety Plan, specifically, the bacterial standards and examination of single service container requirements

Amendments to the 2015 Methods of Making Sanitation Ratings of Milk Shippers

Single Service Ratings procedure was modified to include a scoring system to objectively determine if facilities will pass or fail a rating inspection. Previous rules gave the rating officer to authority to subjectively “judge” if the facility would pass or fail a rating, with minimal guidelines as to how to make that determination.

Amendments to the 2015 Interstate Milk Shipments

A certification and re-certification procedure for delegated sample surveillance officers has been created. This allows individuals certified to conduct foreign facility inspections under the Third party Certification program to establish a procedure that is with consistent with current protocol in the US.

Significant changes for the 2015 Evaluation of Milk Laboratories (EML)

The process for application and approval of future dairy product testing modalities has been described. This will provide Milk Laboratories the opportunity to apply for and acquire additional testing options that are more economical, more accurate and generate quicker results when performing quality control testing in the dairy industry.
